

FiberTech Polymers, LLC Environmental Statement

At FiberTech Polymers we take pride in our efforts to establish new levels of environmental responsibility while delivering highly durable fiber reinforced composite products.

Since its inception in 1998, FiberTech has been on a mission to recycle worthless paper mill waste into valuable industrial and consumer products. The company's primary raw material is the waste from another recycling process and thereby actually recycles the waste stream from other recyclers. FiberTech uses the phrase ThreeCycle™ technology to describe its innovative process that takes recycling one step further. This waste stream has no other viable alternative use, and, in fact, millions of tons of this waste are produced worldwide and poured into landfills annually. It is believed that FiberTech has created the most environmentally responsible solution for this waste product.

- Our composite products are manufactured using a minimum of 90% Post-Consumer Recycled Materials and have been certified by Scientific Certification Systems.
- Sixteen feet of SmartEdge (5/16" x 3.5" x 192") edging recycles 54 half gallon milk containers.
- An average TimberWolf® residential backyard fence installation* recycles 28,218 half gallon milk containers.
- Our products have long use cycles reducing replacement costs and maximizing material usage efficiency.
- Our products are very low maintenance and require no treatments, paint or stains, solvents, varnishes or preservatives that may contain contaminating chemicals.
- Our manufacturing facility is a closed-loop system not allowing any harmful contaminants to leave the plant in any form.
